## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 1-20, 22-24, 26 are considered allowable since when reading the claims in light of the specification none of the references of record alone or in combination disclose or suggest the combinations of limitations specified in the independent claims. As to claims 1-5, 22 and 23, the prior art of record does not teach sequentially reading the data stored in one or more of the memory cells, beginning with the memory cell identified by the starting parameter; receiving an ending parameter to identify another one of the memory cells; and sequentially reading data from one or more of the memory cells, beginning with the memory cell identified by the starting parameter and finishing with the memory cell identified by the ending parameter. As to claims 6-9, the prior art of record does not teach wherein an attached parameter L can also be received at the same time to receive the parameter N, and L is a positive integer larger than N, wherein by way of the attached parameter to stop reading unnumbered memory cells after reading the L-th one of memory cells in the linear arrangement order.

As to claims 10-18, the prior art of record does not teach receiving a specific amount of parameters, wherein the 2-D sensor is composed of a specific amount of linear sensors, and each the linear sensor has a plurality of memory cells arranged by linear order and each parameter is a positive integer corresponding to a single linear

sensor; and numbering the memory cells sequentially depending on linear arrangement order from the first memory cell until a (N-1)-th memory cell, wherein N is the parameter corresponding to the linear sensor; and reading the contents of the memory cells that are unnumbered in linear arrangement order sequentially.

As to claims 19-20, the prior art of record does not teach receiving a plurality of parameters, wherein the linear sensor has a plurality of memory cells arranged in linear order and each the memory cell is independent from others, and each of the parameters is a positive integers; numbering the memory cells sequentially from a first memory cell of the linear sensor depending on linear arrangement order sequentially to find out a plurality of specific memory cells with numbers equal to the parameters, wherein the specific memory cells are paired off and each pair of the specific memory cells marks a specific memory cell section; and reading the specific memory cell sections sequentially depending on linear arrangement order.

As to claims 24 and 26, the prior art of record does not teach wherein the memory cells allow sequential access to the stored data according to the linear arrangement of the sensing units, the starting parameter, and an ending parameter, the ending parameter to identify which memory cell is last in the sequence of memory cells to be read. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the-issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
